

E-commerce Web Application Project

E-commerce (electronic commerce) is the buying and selling of goods or services over the internet. It also involves the transfer of money and data to complete transactions. In 2024, global e-commerce sales exceeded \$6 trillion, and the industry continues to grow rapidly.

The Aim of the Project:

To build a full-featured web application for selling and buying products online, focusing on small businesses in Egypt.

The Web App Should Include the Following Features:

1. Authentication System

- Registration: First Name, Last Name, Email, Password & Confirm Password, Mobile Phone, Profile Picture (optional), Activation Email after registration (expires after 24 hours).
- Login: After email activation, users can log in using email and password.
- Password Reset: Users can request a password reset link to their email.
- User Profile Page: View/edit profile (except email), view orders, wishlist, add extra info (address, birthdate, city, country).

2. Product System

- Sellers can create, update, delete products including: Title, Description, Price, Stock Quantity, Category, Images, Tags, Brand, Optional Discount.
- Users can browse, search, and filter products. Product detail page includes description, slider images, price, ratings, reviews, and related products.

3. Cart & Order System

- Shopping Cart: Add, update, remove products, persistent cart for logged in/out users.
- Checkout: Shipping address, payment method (simulate), order confirmation, order summary.
- Order History: View previous orders. Sellers can view sales.
- Order Status: Status flow: Pending → Processing → Shipped → Delivered. Admin or seller can update.

4. Homepage

- Slider with top-rated or featured products.
- Sections for featured categories, latest products, and best sellers.
- Search bar to search products by name, tag, or brand.

5. Admin Panel (Basic CMS)

- Manage users, products, categories, tags.
- Approve/reject products submitted by sellers.
- Feature products, view orders and sales analytics.

Bonus Features:

- Login with Google or Facebook.
- Add to Wishlist.
- Product rating and written reviews, with replies.
- Notification system for orders and promotions.
- Email confirmation on every order.
- Shipment tracking (simulated).
- Multi-language support (Arabic and English).
- Fully mobile responsive design.
