Summary

Software Engineer with a strong background in algorithmic problem solving (600+ Codeforces problems) and full-stack development. Specialized in building scalable backend architecture using Python/Django and responsive frontends with React.

Experience

Egyptian Armed Forces – IT Department (OMA) (Django, WebSockets, Oracle) Oct 2024 – Aug 2025

Backend Developer

- Architected a secure **leader voting system** to synchronize critical decision-making data across distributed units.
- Implemented **real-time synchronization** using WebSockets, ensuring instant updates for commanders.
- Optimized complex Oracle SQL queries and indexes, [**Quantify here: e.g., reducing query execution time by 40% or from 20min to 2s**].

PulseHub (Django, Celery, Redis, Docker)

Nov 2022 – Nov 2023

Full Stack Developer

- Developed a centralized company management system with workflow automation.
- Engineered asynchronous background tasks using Celery and Redis for real-time notifications and data processing.
- Implemented robust security measures including two-factor authentication (2FA).

bld.ai (Django, React)

Aug 2022 – Nov 2022

Software Engineer Intern

- Developed responsive front-end interfaces using React, ensuring cross-browser compatibility.
- Built and documented RESTful APIs using Django to support frontend functionality.

Freelancing

TriFit Gym Management System | Django, React Native, PostgreSQL, Redis, Celery

[Live Demo](#)

- * Designed a full-stack gym management ecosystem with a Django REST API backend and React Native mobile app.
- * Integrated Celery and Redis to handle asynchronous tasks, improving application responsiveness.
- * Implemented complex data processing features, including personalized diet/exercise modules powered by NumPy.
- * Built an analytics dashboard with SQL aggregation to provide actionable business insights.

Goby Delivery Platform | Django, Nginx, Firebase

[Live Demo](#)

- * Built a scalable multi-vendor delivery platform connecting restaurants and customers.
- * Customized the Django Admin dashboard to provide advanced payment tracking and business analytics.
- * Configured and deployed the application architecture using Nginx on a Linux server.
- * Integrated Firebase Cloud Messaging (FCM) for real-time order status push notifications.

Educational Portal Platform | Django, React

[GitHub Repo](#)

- * Built a comprehensive educational portal using a Django backend and React frontend.
- * Implemented a course management system with secure student subscription functionality.
- * Developed progress tracking and analytics dashboards for both instructors and students.

Education

Information Technology Institute (ITI)

Aug 2025 - Nov 2025

Python Track focusing on Django and Open Source Technologies

Menoufia University

2019 – 2024

B.Sc. in Electronic Engineering, Computer Engineering Dept.

GPA: 92% (3.8/4.0) — Ranked 4th in Class

Technical Skills

Programming Languages: Python, JavaScript, C++, C#, Go

Frameworks & Libraries: Django, Django REST Framework (DRF), React, Next.js, Celery, NumPy

Databases, DevOps & Tools: PostgreSQL, MySQL, OracleDB, Redis, Docker, Nginx, Linux, Git, Jenkins, Firebase

Achievements

- * **Codeforces:** 600+ problems solved - [Abdelfattah27](#)
- * **Hackerrank:** 200+ problems solved - [Abdelfattah273](#)
- * **LeetCode:** 50+ problems solved - [Abdelfattah273](#)
- * **Top 3 Menofia ECPC 2021:** Achieved regional recognition in programming competition - [Certificate](#)
